Debridge is about to scale \$100m in daily volume.

This will bring big changes to DeFi, making it easier to access liquidity across chains.

So, if you often explore DeFi dApps or you're new to it,

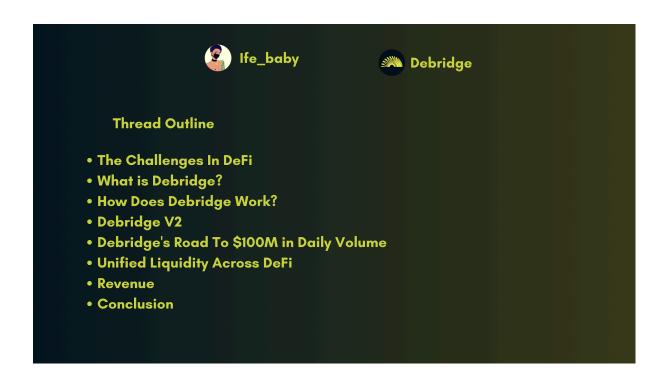

you wouldn't want to miss this.

Let's explore ▼.

Thread Outline

Before we proceed, the following topics will be discussed in this thread:

The Challenges In DeFi

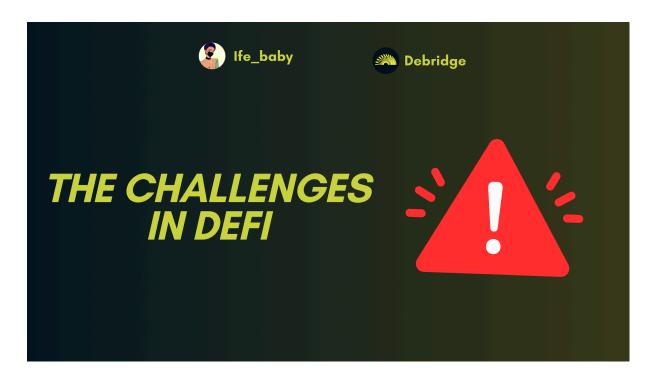

Due to the bull run, one of the tasks I gave myself is to stay on-chain.

This is because of the endless opportunities I could get from interacting with dApps.

But during my research, I noticed how liquidity is one of the major challenges in DeFi.

And this limits the overall potential of DeFi and makes it harder for protocols to operate efficiently and for users to get the best returns on their investments.

But I found Debridge and it's currently on the road to \$100m in daily volume which is a huge flex.

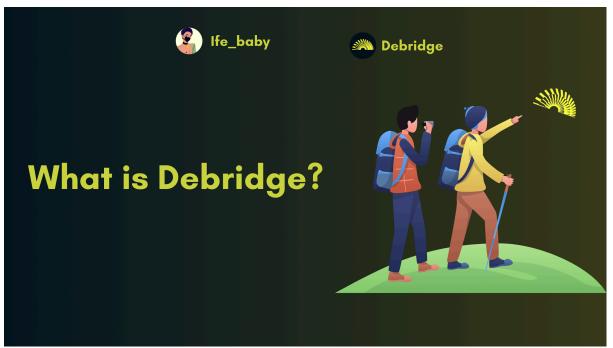

What is Debridge?

Debridge is an innovative decentralized platform that allows you to perform cross-chain interactions.

With debridge, you can move your assets from one chain to another seamlessly.

It aims to offer an internet of liquidity to be able to trade anything for anything immediately with no gas fees, slippage, and surprises.

But that's not all.

How Does Debridge Work?

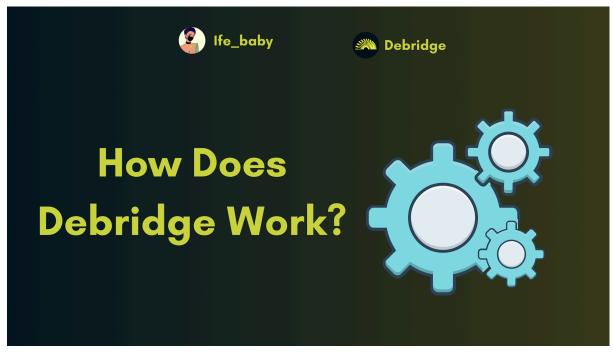

Debridge works by using validators to verify the transactions across chains.

They are independent validators who ensure that the blockchain system is stable and in good shape.

Here's how the validators operate:

- ➤ Run a debridge node.
- ➤ Verify the authenticity of the transactions passing through the debridge smart contracts by signing them.
- ➤ The validators are selected by the debridge governance.

There's more...

Debridge V2

More than offering no gas fees and no slippage, debrige is working towards offering you more in the coming v2.

You can expect to enjoy benefits like;

- **⇒**Gasless transfers
- ⇒Same-chain intents
- ⇒Next-gen features

The next gen features includes;

- → Stop limits
- → Dollar Cost Averaging (DCA) and Time Weighted Average Price (TWAP)
- → Fill or Kill (FOK)
- → SocialFi apps with copy-trading, and more.

All of these you'll be seeing across different DeFi dApps, powered by debridge.

Debridge's Road To \$100M in Daily Volume

To achieve the \$100M in daily volume, the debridge community will play a huge role.

The community which will include you, I, your friends, and my friends will contribute to this journey.

You can expect the following from debridge;

- \rightarrow Grants.
- →Working groups.
- →Regular town halls.
- →Open collaborations.

It's going to be an amazing journey.

Unified Liquidity Across DeFi

Debridge is building to be an internet of liquidity to blockchains across DeFi.

It will connect Tron, native bitcoin, and several other chains into the DeFistack.

This is for real-time movement of billions of dollars of idle assets. With this vision, DeFi will be much more accessible.

There's more...

Revenue

Debridge is the next big shot in the crypto space. I'll tell you why.

It's currently the leading bridge economy which is one of the reasons why it is unstoppable.

Stick with me.

Debridge has accumulated \$13M in fees into the treasury, and \$35k in daily fees is generated.

So huge and interesting.

These revenues that are being accumulated are what helps debridge grow long term.

This is why you wouldn't want to miss it.

Conclusion

Debridge's road to \$100m isn't what any DeFi enthusiast should miss.

Whether you're a seasoned DeFi explorer or you're new, this journey is going to open endless opportunities.

Also, by joining debridge's community, you can help achieve this goal faster.
