

This is a page of live, editable notes¹. It's probably not indexed by Google. It's almost certainly transient. If I know you, you might get comment or edit access if you ask.

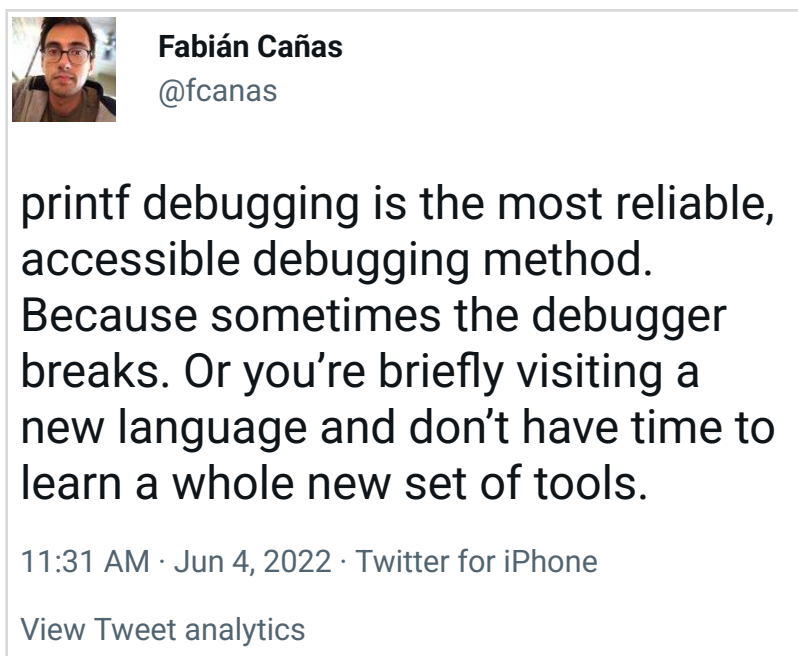

What about Tweets?

Jun 4, 2022

What can a Tweet look like? No way that I can see to embed HTML, or card-like previews from page metadata.

<https://twitter.com/fcanas/status/1533109086312595459>

But I can copy styled html, then put it in a table.

CLI GUI App

Mar 28, 2022

Docket is a command-line macOS app with a UI. Given a schedule defined in a simple JSON file, it shows a timeline at the top of the screen (Yes, the screen. Not the Terminal) with a cursor passing through colored bars for the segments in the schedule. Notifications appear when time transitions to the next phase.

¹ Credit for the idea for this page: https://twitter.com/c_at_work/status/1507391285094662149

I'm still not sure if I'm putting up the source or not, but I will be publishing the app. I would have done it tonight, but instead I put together this page. I published [docket](#) and it should be available via a [homebrew tap](#).
