

# Projects

Construction Technology is a project based course which gives students a chance to "learn to do by doing".

- All students will be allowed to design and build individual projects in the senior Construction / Woodworking classes.
- Each project must be preceded by [Project Plans](#).
- The project plans must be submitted and approved by the teacher and fees for materials paid before work on the project can begin.
- Should a student fail to submit their own project proposal in a timely manner, a project will be assigned by the teacher.
- If a student wishes to avoid material fees, projects assigned by the teacher can be made.
- Students will design and build 3 projects of approximately 20 hours of shop time each.
- If a student wishes to build a bigger project, they may combine 2 projects (with teacher approval).
- If a student wishes to build smaller projects, these projects must add up to be equivalent to the 3, 20 hour projects.
- There must still be a minimum of two different projects completed per course.

I have read the Projects document and understand the expectations and responsibilities.
