

Part A: Form a Scientific Question

Create a scientific question that will lead to an experiment. This must be approved before you submit part B. Use words like: What, Where, When, Who, Why, How, Is, Does, Can, Would, Will, Might. Your question must be something that can be answered using the PhET Circuit Simulation.

Due: Friday, May 1 (I will start giving feedback on Wednesday, April 29 -- you can start part B in the meantime, but I will help you refine this question before you start planning the lab).

Type question here.
