

Computers vs. Smartphones

Many tasks that used to be accomplished by using a desktop or laptop computer are now possible to do on our smartphones. The newest smartphone models for example, have the computing power of workstations from a few years ago. Although smartphones are getting faster, smarter and are increasing the number of useful applications, many businesses are slow to utilize these new features.

1. Assume you are now working in your dream job of the future.
2. Your boss comes to you and tells you they are willing to spend \$800 on you for any device you want. Phone, iPad, Laptop, or anything else you can find that will fit in that budget.
3. He would like you to do some research and record a 1 minute screencastify on the product that you want. Make sure you tell him about the features it has and explain why it is the best.

Note: Screencastify is added to Chrome as an "Extension" by going to the [Chrome Web Store](#) and clicking "Add to Chrome". [This video](#) shows you step by step how to install and quickly use Screencastify.

- Once added, the Screencastify icon will appear at the top of chrome next to your URL(Omnibar).
- Clicking on the Icon will start the process for Signing in with your FCPS Google Account credentials.
- You will need to allow Screencastify to access your Camera and Microphone.
- After the extension is "Set up", to do a recording simply click on the icon again and select from the basic options on how you want to record.
- Record your video and stop the recording.
- Share the link!
- IF NEEDED - More Directions are [here](#)- technology tools for you.
