

Written Assignment Option #9

According to the reading this week, what social structures and norms around gender exist within the healthcare systems? What barriers or struggles exist because of these? Explain how these are gendered or based on other intersections such as race, class, sexuality. Give at least two specific references or examples from each of the readings you choose that demonstrates that you read and understood the reading.

See Course Information for in-depth [Writing Assignment Guidelines](#) for these options - remember that you must **only** do **four** of these, your choice.
