

[2018 Oklahoma Deer Forecast](#) November 1, 2018

Game & Fish

... recovering from those drought years. ... Most remember the heart-breaking season of 2013, when the harvest plunged from a five-year average of more than 105,000 down to about 88,000. After four years of drought, deer numbers in western Oklahoma were noticeably thin, and elsewhere production was spotty, with a herd that just generally was not as healthy or productive as it might be otherwise..
