

### **What is an Airdrop ?**

Airdrop is a distribution of crypto coins for free, from new protocols to active community members who meet the criteria. This can happen to attract new users to the community and reward the members who are already using the blockchain and meet the criteria. The criteria usually are simply tasks like bridging crypto in a specific chain then doing 1-2 transactions per week, providing liquidity and being active in the ecosystem.

Airdrops is a great way of investment cause all you need is a small amount of money be patient and disciplined during the process for a huge potential return
