Species Rules & Info!

1. This is an open species but please keep all rules in mind!
2. You're allowed to make adopts if they completely follow species rules!
3. I've decided that there are no rare traits to whiskhreats.
4. Wings are NOT allowed
5. No big horns or spikes! (two little head horns are alright tho!)
6. Feathers unless excited/happy are always down
7. Feathers can be glowing even when down UNLESS they are sad or heartbroken.

8. No scales! These guys are soft mammal-like creatures!
9. Their feathers, insides, heart liquid, eyes, and markings glow!
10. Eyes, insides, and markings do NOT glow if sad or heartbroken.
11. The heart is a crucial part of Whiskhearts and every whiskheart must have one! They are made of a thick glass and have a liquid inside that glows!
12. Do not make the liquid inside the heart be a kind of drink, it is it's own special liquid that glows and sparkles but has the same consistency as blood.
13. Whiskhearts do not age past early adult. (this is look wise, Whiskhearts can not die of old age)
14. Whiskhearts can reproduce sexually or asexually!

15. They can control their height! General height is of a medium sized dog (2-3 feet tall), they have no limit to how small or big they can get!

16. The way whiskhearts produce asxexualy is via forging a glass heart by finding some sand/glass they very much like (from a special beach that has sentimental value to them or something close to that) wounding their heart a little and putting some of their heart liquid into the heart, in three days a little Whiskheart will be born.

17. You may make an anthro version of them!

18. Normal anthro height is 4'3ft to 5'3ft but again they can control their height!

19. Whiskhearts mainly live on a spiritual plain that the normal eye can't see.

20. Whiskhearts can, even if not in the spiritual plain, choose whether they can be seen or not! (Think my neighbor totoro)

21. The sub species, Amihearts is an amphibious breed (instead of a 'mane' they have an inflatable neck pouch that is all the way around their neck, instead of back feathers they have a tadpole like fin that goes all the way onto and around their tail, their tails are usually smaller than a normal whiskhearts.), they can have scales and small moose like antlers unlike normal whiskhearts

22. Whickhearts are dead/undead whiskhearts (usually death caused by heartbreak) demented twisted wood has grown and burst from inside of their hearts out and wraps around them. They can have any sized plant or glass

like horns/antlers & spikes unlike normal whiskhearts.

23. In the spiritual plain they have a general glow all around them, giving them a somewhat godly/spirit look.

24. They may live on the spirit plain but it is not fully known if they are spirits or not!

25. Whiskhearts are very friendly and kind creatures but every single ones personality is different!

26. There are no color restrictions! Go nuts!

27. There are no marking restrictions either!

28. They can not cross breed but feel free to make 'inspired' hybrids!

29. Please always credit me as the species creator!

30. They are omnivores but mainly eat fruit and small things.

31. They don't usually wear piercings/jewelry or clothing unless they were gifted it by someone special to them! Anthro forms do have an exception to this rule so feel free to draw your anthro Whiskheart with clothes and/or jewelry on!

32. Whiskhearts don't have anything gender specific!

33. Gravity is lighter on them! Letting them be able to jump and basically glide for a little while!

34. They love to live in nature dominated places! (Forests, beaches, jungles, ect!)

35. No cybernetics, they can regrow limbs, organs, ect and reject robotic replacements since they are not needed!

36. When feathers glow they can puff up a bit so if hidden underneath fur they can show when puffed up!

37. Whiskhearts don't have many 'set' traits! Basically if you wanted to you could add more limbs, eyes, entinie, feathers, tails, ect!

38. I am still working on their world and info, so feel free to ask me any questions!
