# The Grinch PC Setup Guide <u>Discord</u> <u>Leaderboard</u>

In this guide I use an official DVD-ROM of the game inside my computer, there are certainly 'other ways' to acquire the game. Just be mindful that you want a version that can mount a disc to a virtual drive, not just the game with the ISO. The reason is that the ISO version does have some bugs such as:

- Losing game audio permanently if entering the underwater area of Who Lake

- The Load Game screen not working properly
- Game crashes are more regular

- Sometimes the OCD climbing wall at the start of Who Lake will not let you grab the ledge on the right handside (disadvantage for any%)

Feel free to ask in our community discord for guidance on how to find the game.

## Step 1

After inserting/mounting the disc right click and select open

Run the Setup.exe and install the game (I install it to my C Drive)

# Step 3

After the setup is complete repeat Step 1 and open the folder of the Disc Drive, then the datas folder and afterwards the bin folder

Right click the TheGrinch.exe and select Properties. Once in the Properties window select the Compatibility Tab and enable Compatibility Mode afterwards select the drop down option below and be sure to have Windows 95 selected (Windows 98 may work too) then hit apply.

# Step 5

Run TheGrinch.exe (this should make the resolution on your screen go weird but the game should load up in full screen once past the company logos and at the home screen quit out

After quitting out of the game in fullscreen mode repeat Step 4 but this time turn off Compatibility Mode and hit apply (skipping this step will not allow the game to load in DXWND)

TheGrinch.exe Properties X								
General Compatibility Details								
If this program isn't working correctly on this version of Windows, try running the compatibility troubleshooter.								
Run compatibility troubleshooter								
How do I choose compatibility settings manually?								
Compatibility mode Run this program in compatibility mode for: Windows 95								
Settings Reduced color mode 8-bit (256) color								
Run in 640 x 480 screen resolution								
Run this program as an administrator								
Register this program for restart								
Change high DPI settings								
Change settings for all users								
OK Cancel Apply								

### Step 7

**Download DXWND** and open the program up, afterwards drag TheGrinch.exe into the blank DXWND window space then right click on the program inside DXWND and select Modify (The modify window should pop up by default when dragging the program in)

Copy my settings here, the most important stuff to note is having the window in Desktop Center and running the game in DirectX9 some reason this DirectX worked the best when testing. After this setup is complete you should be able to double click The Grinch program in the DXWND window to launch the game in windowed mode.

### Step 9

Feel free to skip this step but here is the controller setting I use. I use a PS2 Controller plugged into my computer using a USB Adaptor or a MUSIA. I then run my controller through a program called <u>JoyToKey</u> which reassigns my button presses to keyboard strokes.

When the game is booted up select Configuration and copy my settings here (every time I start up the program I have to change the resolution just a heads up)

	Video						
Resolution	Renderer						
<b>320 X 240</b>	📕 With 3D Card						
🗖 512 X 384	🗖 Without 3D Card						
□ 640 X 480 □ 800 X 600	Level of details						
<b>1</b> 024 X 788	🗖 Medium						
	High 📕						
Brightness							
<u> </u>							
B	<b>R</b> ø ack						

## Step 11

This step can be skipped but the best way to capture the gameplay on OBS is using Display Capture. I recommending adding the Crop Filter to your Display Capture, if you copy my settings below this should capture your gameplay correctly (assuming you Desktop centered the gameplay and matched my game resolutions)
