

Properties of Water Photo Assignment
Graded

Take your own pictures that represent the properties of water. Choose 5 of below.

1. adhesion
2. cohesion
3. high surface tension
4. high heat of vapourization
5. high heat capacity
6. lower density solid
7. solvent that dissolves many things

For each picture:

- a) Briefly describe, in point form, why the picture represents the property of water. Don't spend time getting a perfect picture - the description is what matters. It can be a stretch. Just make sure you describe the link to the properties of water. Put the images in a google doc and submit with descriptions below.
- b) Also below each picture, explain in point form how the structure of water (polar, hydrogen bonding) creates this property.
