Abstract

The abstract is made in two languages, namely United Kingdom and Indonesian Language. The abstract contains briefly about the background, objectives, research methods, research results, and conclusions of the research. Abstracts contain a maximum of 250 words, single spaces are written in italics (Italic) for United Kingdom abstracts. Below the abstract is listed keywords consisting of a maximum of six words, where the first word is the most important. Abstract in Indonesian is a translation from the United Kingdom. The editor reserves the right to edit the abstract for reasons of clarity of the abstract content.

INTRODUCTION

The introduction must contain (in sequence) the general background, a review of previous literature (state of the art) as the basis for a statement of the scientific novelty of the article, a statement of scientific novelty, and the research problem or hypothesis. At the end of the introduction, the purpose of the article study must be written. In the scientific article format, a literature review is not permitted as in a research report, but is realized in the form of a review of previous literature (state of the art) followed by a statement of the scientific novelty of the article.

Citations must be written using bodynote format such as (Uwuigbe & Ajibolade, 2013), (Wang, 2016), (Muttakin et al., 2015) and be relevant to the bibliography/bibliography (recommended using the Mendeley application).

RESEARCH METHODS

The research methods used in solving problems include analytical methods. Image captions are placed as part of the figure caption, not part of the image. The methods used to complete the research are written in this section.

In Research Methods, small and non-main tools (which are common in the lab, such as: scissors, measuring cups, pencils) do not need to be written down, but just

write down the main set of equipment, or the main tools used for analysis and/ or characterization, even needing to get down to type and accuracy; Write in full the research location, number of respondents, how to process the results of observations or interviews or questionnaires, how to measure performance benchmarks; Common methods do not need to be written in detail, but simply refer to reference books. Experimental procedures must be written in the form of news sentences, not command sentences.

RESULTS AND DISCUSSION

Results and discussion contain research findings and scientific discussion. Write down scientific findings obtained from the results of research that has been carried out but must be supported by adequate data. The scientific findings referred to here are not research data obtained. These scientific findings must be explained scientifically including: What scientific findings were obtained? Why could that happen? Why is the variable trend like that? All these questions must be explained scientifically, not just descriptively, if necessary supported by adequate basic scientific phenomena. Apart from that, the comparison must also be explained with the results of other researchers on almost the same topic. Research results and findings must be able to answer the research hypothesis in the introduction section.

Manuscripts can be written in Indonesian or English with a maximum number of pages of 20 pages including figures and tables. Manuscripts must be written according to this article template in print-ready form (Camera ready). Articles must be written in A4 size (210 x 297 mm) and with a left margin of 3 cm, right margin of 3 cm, bottom margin of 3 cm and top margin of 3 cm. Manuscripts must be written in Times New Roman font with a font size of 12 pt, single spaced, and in one column format (except for the article title, author's name and abstract). The distance between columns is 1 cm.

Foreign words or terms are used in italics (*Italic*). It is best to avoid using foreign terms for Indonesian language articles. The new paragraph starts 1.15 cm from the left border, while there is no space between paragraphs.

Tables and figures are placed in the text group after the table or figure is referenced. Each image must have an image title (Figure Caption) at the bottom of the image and be numbered sequentially followed by the image title. Each table must be given a table title (Table Caption) and numbered sequentially at the top of the table followed by the table title. Images must be guaranteed to print clearly (font size, resolution and line size must be guaranteed to print clearly). Pictures and tables and diagrams/schemes should be placed in columns between groups of text or if they are too large, placed in the middle of the page. Tables must not contain vertical lines, while horizontal lines are allowed but only the important ones.

The use of tables and figures must be mentioned in the text by mentioning table 1; figure 1 and so on

Table 1 Write a description of the table

Ket.	Ket.	Ket.
Entry 1	Data	Data
Entry 2	Data	Data

Figure 1

$$n = a + b$$

An explanation of the mathematical formula can be written here.
