

Introduction

This guide will help you set up login access to the Beyond Identity User Portal for your end users. The Beyond Identity User Portal app allows you to provide your end users with access to the Beyond Identity User Portal to enroll and manage their own identities and devices.

Prerequisites

Obtain the following information from your Beyond Identity representative or contact support@beyondidentity.com:

- Access to the Beyond Identity Admin Portal

Supported Features

- IdP-initiated SSO
- SP-initiated SSO

Procedure

Beyond Identity User Portal Access

1. Add the Beyond Identity User Portal app in Okta
 - a. Search for and Add the Beyond Identity User Portal.

Add

Beyond Identity User Portal

Overview

Beyond Identity's mission is to empower the next generation of secure digital business. By eliminating passwords and creating a fundamentally secure Chain of Trust, our customers are able to increase business velocity, implement new business models, and reduce operating costs. The Beyond Identity SCIM 2.0 app allows you to sync the users in Okta's Universal Directory with the Beyond Identity directory via SCIM and basic CRUD operations. This saves operational overhead by automating user management of the Okta and Beyond Identity integration.

Capabilities

Access	Provisioning
SAML	✓ Create
OIDC	✓ Update
WS-Federation	✓ Deactivate
	Sync Password
	Group Linking
	Group Push
	Schema Discovery
	Attribute Mastering
	Attribute Writeback

- b. Allow displaying of the app to users and on mobile.

Application label: Beyond Identity User Portal
This label displays under the app on your home page

Application Visibility
