

# Math 6A

## Unit #2: Ordering Numbers

Lesson:

### 1. Opposite Numbers

Resources:

#### Objective:

In this unit, you will use positive and negative numbers to describe quantities as having opposite directions or values.

#### Keywords:

Negative Number: a number less than (smaller than) zero. Show with a negative sign in front of the number (Example: -5 is negative 5)

Positive Number: a number greater than (bigger than) zero. Represented with a positive sign (+5 is positive 5)

Opposite Number: Numbers with opposite signs that are the same distance from zero. (An example of opposite numbers would be -2 and +2. They are opposite because they are both 2 digits away from zero.)

#### Helpful Videos:

Negative Numbers: An Overview- This short video does a great job explaining what negative numbers are and gives some real-life examples.

Math Antics: Negative Numbers- A great YouTube channel and an awesome video. Math Antics go into detail about negative numbers.

#### Other Resources:

\*\*\*The Opposite of Zero?!?\*\*\* Zero is the only number without an opposite because it is in the middle of positive and negative numbers!

### Opposite Numbers

Opposite numbers are the same distance from 0.

The sum of opposites is zero.

**Examples:**

-5 and 5 are opposite numbers.

The opposite of 0 is 0.

## 2. Model with Opposite Numbers

### Objective:

At the end of this lesson you will be able to use positive and negative numbers and zero to represent amounts in real-world scenarios

### Keywords:

Difference: the result of subtracting one number from another number (the answer to a subtraction problem!)

Negative Number: a number less than (smaller than) zero. Show with a negative sign in front of the number (Example: -5 is negative 5)

Positive Number: a number greater than (bigger than) zero. Represented with a positive sign (+5 is positive 5)

Opposite Number: Numbers with opposite signs that are the same distance from zero. (An example of opposite numbers would be -2 and +2. They are opposite because they are both 2 digits away from zero.)

### Helpful Videos:

**Practice with Mr. G:** Use the links below to watch Mr. G solve the practice problems for this unit.

[Questions 1-3](#)

[Question #4](#)

[Question #5](#)

	<p><b>Other Resources:</b></p>
<p><b>3. Model with Opposite Numbers Discussion</b></p>	<p><b>Part 1:</b> In this assignment, you will examine the prompt below. You will then begin brainstorming a response. To get full credit you will need to do your best to include all of the information below.</p> <p>In your journal, you described a business you would create if someone gave you \$100 to start it. You imagined one transaction in which you <i>spent</i> part of your startup money. You also imagined one transaction in which you <i>earned</i> money. Then you used positive and negative numbers to see how much money you would have after the two transactions had taken place.</p> <p>In your post, describe your business to your peers:</p> <ul style="list-style-type: none"> <li>• Explain how your business would work.</li> <li>• Describe the transaction in which you spent money.</li> <li>• Describe the transaction in which you earned money.</li> <li>• State the total amount of money you would have after the two transactions took place.</li> </ul> <p>The second part of this assignment is to respond to TWO of your classmates' posts.</p> <p>Then read two of your peers' descriptions of their businesses. Respond to two of your peers:</p> <ul style="list-style-type: none"> <li>• For each business, suggest a new transaction that might take place there.</li> <li>• Explain whether the transaction would cost money or earn money.</li> <li>• Represent your transaction for your peer's business with a mathematical statement.</li> </ul> <p>You will not do anything else for this lesson! You will find the link to actually post your</p>

	discussion during your next lesson.
<b>4. Model with Opposite Numbers Discussion</b>	<p>This lesson is where you actually post your response to the discussion prompt and then respond to your classmates' posts.</p> <p><b><u>REMEMBER: You need to make an original post and then you MUST respond to TWO of your classmates' posts to earn full credit.</u></b></p> <p><i><b>HINT: Simply replying "I agree" isn't going to earn you points.</b></i> You have to suggest a new transaction and explain whether it will cost or earn money. And then you have to show that as a mathematical statement.</p> <p>*If responding to someone who is proposing a Lemonade Stand as their business you could respond by describing a transaction where the business needs to buy new cups. This is an expense so it will cost the business money. If a package of new cups costs \$10 dollars than you would need to take that amount out of the current amount. .</p>
<b>5. Opposites on a Number Line</b>	<p><b>Objectives:</b> We will be able to recognize opposite numbers!</p> <p>We will recognize that the opposite of the opposite of a number is the number itself</p> <p><b>Keywords:</b> <u>Integer</u>: a positive or negative whole number, and zero <u>Number Line</u>: a visual display of numbers in relation to each other <u>Negative Integer</u>: a number less than (smaller than) zero. Show with a negative sign in front of the number (Example: -5 is negative 5) <u>Positive Number</u>: a number greater than (bigger than) zero. Represented with a positive sign (+5 is positive 5) <u>Opposite Number</u>: Numbers with opposite signs that are the same distance from zero. (An example of opposite numbers would be -2 and +2. They are opposite because they are both 2 digits away from zero.)</p> <p><b>Helpful Videos:</b> Mr. G's Videos:</p> <ul style="list-style-type: none"> <li>• <a href="#">Part 1: Opposite Numbers</a></li> <li>• <a href="#">Part 2: Opposite of the Opposite</a></li> </ul>

## 6. Statements of Order

### Objective:

In this lesson will be able to interpret inequalities to determine the relative position of two numbers on a number line.

### Keywords:

Inequality: a statement that one number is less than, greater than or equal to or less than or equal too or greater than or equal to another number.

Relative Position: the position of a particular value in relation to another value

### Helpful Videos:

Mr. G's Videos

- [Part 1: Inequalities](#)
- [Part 2: Relative Position \(Order\)](#)

### Other Resources:

*Equality and Inequality*

## 7. Model w/ Statements of Order

### Objective:

We will be able to write inequalities using numbers from story problems!

We will be able to write 'statements of order' for numbers in the real-world

### Keywords:

Inequality: An inequality compares two values, showing if one is less than, greater than, or simply not equal to another value.

### Helpful Videos:

Mr. G's Videos:

- [Statement of Order \(Two Numbers\) \(Part 1\)](#)
- [Statement of Order \(Four Numbers\) \(Part 2\):](#)

### Other Resources:

8. Absolute Value	<p><b>Mr. G's Videos:</b></p> <p>Absolute Value (Intro) <a href="https://www.loom.com/share/b3aa105151c74b04bef134de5cf2b3b3">https://www.loom.com/share/b3aa105151c74b04bef134de5cf2b3b3</a></p> <p>Absolute Value (Comparing) <a href="https://www.loom.com/share/9d72581e6fbf4c5e894aa90b93f4f3a5">https://www.loom.com/share/9d72581e6fbf4c5e894aa90b93f4f3a5</a></p> <p>Mr. G Solves the Practice Problems (<a href="https://www.loom.com/share/aafd0d961b5e425da6ede54cb547d9b5">https://www.loom.com/share/aafd0d961b5e425da6ede54cb547d9b5</a>)</p>
9. Model w/ Absolute Value	<p><b>Objective:</b> We will be able to use real numbers to represent real-life situations and interpret absolute value as a magnitude (positive or negative)</p> <p><b>Keywords:</b> <b>Magnitude:</b> a number that represents the size of a quantity regardless of its sign (ALSO CALLED ABSOLUTE VALUE!)</p> <p>(The magnitude of 6 is 6 and the magnitude of -6 is also 6)</p> <p><b>Quantity:</b> How much there is of something</p> <p><b>Helpful Videos:</b> Mr. G's Videos <a href="#">Lesson Examples</a> <a href="#">Mr. G goes through the practice!</a></p>
10. Ordering Numbers vs Ordering Absolute Values	<p><b>Objective:</b> We will be able to compare absolute value and regular integers.</p> <p>For Example: Which is greater <math> -5 </math> or <math>-26</math>?</p> <p><b>Keywords:</b> <b>Absolute Value:</b> A number's distance from zero!</p> <p><b>Helpful Videos:</b></p>
