

Port Townsend High School Science II Students Present:

# Earth Summit 2017, 6:00 PM on May 16

The future is in our hands!

Port Townsend High School Auditorium and Annex

Science II students present the second annual **Port Townsend High School Earth Summit**.

We begin the evening with a message from Washington State Representative Mike Chapman. As our representative, Mike Chapman works to protect the unique characteristics of our region and actively supports youth involvement in the environment and in politics. He currently is supporting Port Townsend High School students in their quest to place a Bottle Bill on the Washington State Ballot.

The main event of the evening follows. All students in Science II will present their findings on issues concerning Climate Change in concurrent sessions in Annex classrooms. They will be reporting on topics that include Ocean Acidification, Global Dimming, Sea Level Rise, Biodiversity, Loss of Glaciers, Extreme Weather, Deforestation and Emerging Diseases. Their presentations will include scholarly research, mathematical modeling and results of original lab explorations.

We invite you to come and be motivated by Representative Chapman's passion for getting involved and inspired by the fine work of our Science II students, and the hope they provide for real solutions!
