The Brief:	Research:	Idea Development:	Prototype:	Evaluate and Modify:	Test:	Important Dates:

How does safety in chemistry relate to other courses? Real Life

2/3/22

In the chameleon project, we are expected to use sodium hydroxide to create the reaction colors off of a Chameleon. We were provided with a cut out of the reptile, Q-tips, and household items. We also used the back of our Chameleon to test out different reactions and colors our strip would take based off of what we used. Art can depict a chemical reaction because it can show how different mixtures, of paint, chemicals and what not can effect the outcome of an artpiece.

2/3/22

Three materials that I might consider using for this project are vinegar, baking soda, and balloons. My vision for this project it to be able to blow up thee balloons using the chemical change with the baking soda and vinegar. Once I blow up the balloons, I will then be able to make the balloons into a sculpture which would be identified as art. My project will demonstrate the chemical changes with Baking Soda and Vinegar. It will blow up the balloons and also create a physical change with the latex. Here aare three links that back up my chemical change.

In all other courses, its really important for you to still stay safe.The rules for staying safe in chemistry ae the same rolls as in any other class.This relates to other courses because no matter what, you can get hurt by anything! Practicing these safe techniques will help you and other people surrounding you stay safe!

8/11/21

So today we created a Coding of different colors using the RBG format. I used the two primary colors black and white to create a black heart coding.

12/7/2021In geometry, im working on designing a piece of stain glass and in world history, were learning about the history of stain glass in religious establishments.In geometry we’re learning about the properties about parrelllograms, so my stained glass project includes many different designs such as paralellagrams,rectangles,squares and etc;

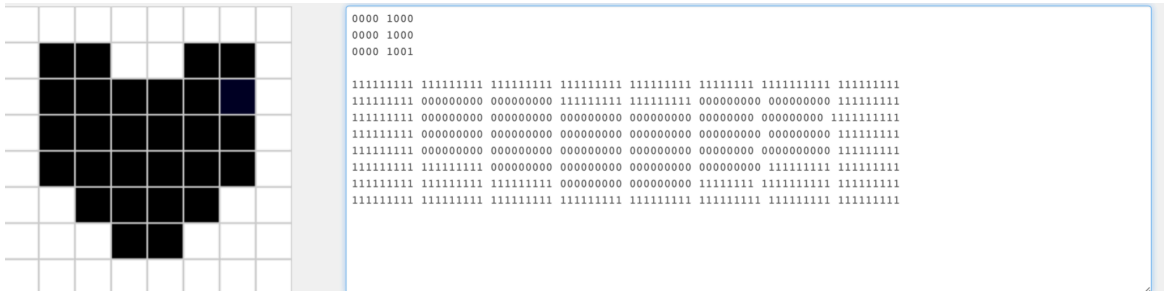

Idea Development:

How does safety in chemistry relate to other courses? Real Life

In all other courses, its really important for you to still stay safe.The rules for staying safe in chemistry ae the same rolls as in any other class.This relates to other courses because no matter what, you can get hurt by anything! Practicing these safe techniques will help you and other people surrounding you stay safe!

So today we created a Coding of different colors using the RBG format. I used the two primary colors black and white to create a black heart coding.

8/11/21

10/20/21

In class, we made friendship bracelets. I decided to give the bracelet to someone who has been in my life and someone who I can trust. I texted this person the news once I found out I was making it. Their reaction was good. I felt good afterwards making something so sentimental for someone. I might surprise someone in the future with a friendship bracelet.

In Mr. Wright's sculpture, I see the principle of design Variety being used a lot. From the variety of color to the variety of cloth, to the variety of texture being used, it brings me to understand that this sculpture is very free in a way. Its freeformed sculpture allows viewers to take the sculpture into their own opinion. The sculpture is very active and messy so readers can take it as is.

In class today we created a code where when you press on the black star a certain amount of times, it changes the color of the star. This relates to STEAM and SCIENCE: The mixture of colors to change the color of the star. TECHNOLOGY: The software we are using to code. ENGINEERING: The building of an app. ART: The colors used to create the app and the use of lines and value. And lastly, MATH: The correct addition it takes to change the color of the star at a certain amount of times.

	<p>8/18/21 Epic Elements PBL</p> <p>My PBL hero is going to be a polar bear that fights to stop forest wildlife fires with her futuristic memories that tells what is about to happen. With this capability, she will be able to prevent much deforestation and harm to the earth and other wildlife animals. Her name is Lenoriann.</p>
	<p>8/18/21 Epic Elements PBL</p> <p>The epic element PBL is a PBL where we will have to write an epic on a noble person. We have to make sure that we incorporate the 7 qualities that the character in the epic has to have. Also the 6 elements of the actual story line.</p>

8/24/21 Learning Journal entry 1 | Geometry

In geometry we are working on developing our character for our game and the background. I want my videogame player to be aWildlife bear ho fights the wildfires.I chose this for my player because the earth is important to me and i chose the background because its fun yet interesting.

Taylor's Webpage About Cookies

A **chocolate chip cookie** is a drop cookie that features chocolate chips or chocolate chunks as it's distinguishing ingredient. Chocolate chip cookies originated in the United States around 1938, when Ruth Graves Wakefield chopped up a Nestlé semi-sweet chocolate bar and added the *chopped chocolate* to a cookie recipe.

The perfect chocolate chip cookie has to be warm and fresh out of the oven. Heres some of my fav cookies.

- Chocolate chip
- sugar cookie
- oatmeal cookie

4/20/22

Guernica Artwork Reflection

My project is related to Cubism and Picasso's Guernica because it has a lot of lines that go through the painting showing similar aspects and inspiration. Also, the way its flattened how and shifting perspectives and simplified color palette are clear points of how our project is related. It has the perfect balance of both lines and color that shows my artwork true inspiration.

This project was honestly an eye opener for us. It really made us realize all of these issues and conflicts in the world, It also really made us see these situations for what they were. It made us notice how big of an effect these problems have on this world and how much of a world conflict can have on it; environment, people living in that environment, and Species in that world.

Mary Stevenson Cassatt (May 22, 1844 – June 14, 1926) was an American painter and printmaker. She was born in Allegheny City, Pennsylvania (now part of Pittsburgh's North Side), but lived much of her adult life in France where she befriended Edgar Degas and exhibited with the Impressionists.
