

## Launching

Content Analyzer can be found at Tools -> Audit -> Content Analyzer

## Changing Default Visible Columns

You can change the default visible column by going to Editor Preferences -> Plugins -> Content Analyzer

When you press Load Content Analyzer will load all visible assets in the column. So you don't need to wait for loading all of the assets but you can load only those you are interested in. (eg search for SM\_Grass to see all grass meshes and just press Load to load them all)
