

Scribble Ebook Creator Review - Does It Work?

In this article, I'll do a deep-dive [Scribble eBook Software](#) review to help you decide if this fancy eBook creator is right for your projects

Let's face it, we all want more traffic, subscribers, and daily sales. And there's one simple solution that still works like gangbusters for this — eBooks.

Whether it's a powerful lead magnet such as a free report or whitepaper or a Kindle book that you sell daily... digital books are still an awesome way to attract traffic and sales for almost any type of business.

But there's just one problem — [creating them](#) can cause all kinds of headaches. Writing, formatting, designing... it can take days or even weeks to create an eBook, plus a steep learning curve and a handful of expensive tools you'll need to master... before you've even hit publish!

But there's a brand-new tool on the market that promises to change all that.

It's called Scribble.

What is Scribble?

Next in my Scribble eBook software review, let's address the question What is Scribble?

Scribble is a cloud-based tool that allows you to create eBooks (reports, whitepapers, etc.) in seconds. It uses ready-made templates and drag-n-drop design features that make self-publishing your eBooks a breeze.

How Does Scribble Work?

I wanted to create an ebook over at my smart home blog www.onesmartcrib.com so I bought Scribble and put it to the test.

When you log into Scribble, you'll see a bunch of [eBook templates](#) to choose from. These are all based on different categories, so you'll need to find one that matches your market/topic/niche.

Once you've selected the template you want to use, you simply click "view" to see how your eBook will look (don't worry, we'll add your content next.)

In this view screen, you can see how the [book will be laid](#) out and get a feel for the style. If you don't like it, you can always go back and choose another template (there are 50 templates to choose from, and you can also edit the templates too, in all kinds of ways.)

You'll notice that the layouts and designs are very slick. They look like professional publications!

Next, you'll be asked where you want to source your content for the book. You can choose:

- Grab from a URL
- Start from scratch
- Copy and paste manually
- Upload Word File
- Start from Article Collection

Let's take a closer look at these options.

👉 [Click here to see Scribe in action!](#)

Grab content from a URL

This allows you to insert any URL you want, and Scribe will automatically pull the content from that page and insert it into your book. It strips the HTML code and only inserts the text from the page. This is my fave method because it saves a ton of time and allows you to use expert content (with credits) so you can target topics and niches you're not an expert in!

Start from ground zero

As it sounds, this option allows you to enter your content like you'd enter it into a Word document. You just type [straight into the software](#).

Manual copy / paste

This allows you to copy content from anywhere you want, and paste it into the book, where the book will format and lay it out for you professionally.

Upload a Microsoft Word File

You can get Scribe to pull your content straight from a Word document, stripping out any code or weird formatting.

Start from Article Collection

Here you can extract content from Scribe's huge library of private label articles which you can use for free, without crediting authors or [linking to the source](#). It's another great way to quickly fill your book with content, for free!

You'll then move to an editing screen, where you can resize text, move content around, edit text directly, add media, links, lists, call to action areas, new pages, and a whole bunch of other options for customizing the look and feel of individual pages or the entire book.

You can even add new pages that use a totally different layout to the rest of your book, giving you a huge amount of flexibility and endless options for your book.

By the way, if you want more details after you read my review, here's an interesting press release available on Marketwatch.

Themes Are Really Cool

While editing, another thing I really liked was the Themes option. With a single click, you can instantly change the color theme and font style of your entire book. It's like giving your book a new "skin" and it's just one more feature that sets Scribble apart from the other tools out there.

Ready to Publish?

Finally, when you're ready to publish, you hit the little "[Generate eBook](#)" button in the top right corner of the screen and voila, your book is now ready!

You can either open the book in a browser to preview it quickly or save as PDF.

Is Scribble right for you?

If you're already creating lead magnets or eBooks for sale, then I have no doubt that Scribble is going to save you hours of work and tons of money on freelancers (if you outsource the design or writing side of it.)

For that reason, I truly believe that Scribble is well worth the investment and perfectly suited for most small to medium-size businesses, especially self-publishers and info-marketers.

It's also a great tool to use if you're a freelancer or agency, working with clients to create [professional eBooks](#) (includes commercial rights, plus a done for you agency website, which is a big bonus!). You could easily charge \$100's for this service, and with Scribble, you could get the work done in way less time than it wouldn't normally take you.

Scribble eBook Software Review: The Bad

— Some of my favorite features are locked behind upsells (3D covers and Flipbook feature)

— When inserting [content from a URL](#), you need to cite the URL source and/or credit the original author of the content, if it's not your own (this isn't really Scribble's fault — it's just the law!)

Scribble eBook Software Review: The Good

— Easy to use

— Glitch free

— Unlimited use (one-time payment)

Sqribble eBook Software Review: The Awesome

- Tons of excellent eBook templates
- Professional page layouts
- Automatic content
- Automatic table of contents generator
- 3D cover creator (available through upsells)
- Flipbook creator (available through upsells)
- Free commercial agency + website included!

Video Review

I found this helpful video review [from Techs4Digital] out on YouTube that compares Sqribble vs Designrr software.

The Price

The company is currently [running a promotion](#) where you can get Sqribble for a steep discount at just \$67 (normally \$197).

The base version is enough for most people. There are also some premium templates and add-ons that you can buy if you are interested later.

About Sqribble's Creator

Sqribble has been developed by Adeel Chowdhry, who is a well-known internet entrepreneur and best seller, with over ten years of experience and has previously created worldwide hits such as Pixel Studio FX which sold tens of thousands of units all around the world. He's known for creating high-quality professional solutions and I expect no less from Sqribble.

Sqribble eBook Software Review: Final Analysis

Without a doubt, Sqribble is a powerful eBook creation tool. Unlike other tools, it's packed with everything you need to start cranking out professional-looking books, reports, whitepapers, and more in seconds.

With automatic content, drag n' drop editing, plus a host of templates and designs ready to customize, you'd struggle to find a more [seamless eBook](#) publishing tool than this.

Being cloud-based is a big bonus too. No need to download any software that clogs up your computer. Whether you're casually publishing books or you're constantly creating lead gen reports for yourself or clients, Sqribble can — and WILL — save you hours of hassle and potentially thousands of dollars in freelance fees over the coming months and years. For that reason alone, it gets my full seal of approval.

So what did you think about my Scribe eBook Software review? Did you find it helpful? If so, would mind social sharing using one the options on this page?

Oh, and if you are interested in checking out Scribe, you can download it below. Happy creating!
