

	Item	Questions about this aspect of the work plan	Suggestions for carrying this work forward
1	Anonymous payment (ZKP)	Is this just P2P, or is there a business use case? What inspired you to create this? Is anyone using it yet?	
2	Cross-Chain solution	Why did R&D stop in summer 2021?	Find a safe bridging solution - could be Anyswap 1: t.me/hpbprice/231029 2: Polynetwork: bit.ly/3qW25kr or 3. Omnibridge fork: t.me/hpbdev/1554
3	Random Number Generator access (HRNG user interface)	Is there a way to reduce the 6-second wait for the next random number?	Commission someone (random.org?) to design a simple, useful interface to attract more users.
4	Representation	How far can the Council influence the technical Roadmap? Are there options for discussion?	Give Council a more constructive format (ie. not just waiting for proposals to vote on) - Wk 1 Devs lead Wk 2 Nodes lead Wk 3 Investors lead Wk 4 Team lead/report
5	ETH VM support	Is this a break from ETH VM, a way of making ETH VM work faster, or something else?	
6	Guides & Training Videos	Can the Foundation support the cost of training, mentoring and videos in English?	Align a set of new English videos/articles with the needs of Devs crossing to HPB from Ethereum.
7	Access to Technical Support	What else can the Foundation give collaborating devs access to?	Provide collaborating devs with access to affordable tools (eg. The Graph for interrogating chain for data, MythX for audits) Set 2022 goal to “make the blockchain a wonderful ecosystem to visit, where tools are in place, and barriers are removed” Ask Dev users “How can we make onboarding easier than anyone?” (conversation / survey): t.me/hpbglobal/524139
8	Address memorability	Does this mean I just need to recall my email?	
9	Block Explorer (API access)	Can we do better in the provision of API links, needed to get an HRC20 token listed on CMC or Coingecko?	Make the latest random number a feature at the top of the homepage: t.me/hpbdev/1537

10	Non-Linear Layer 2 (Demo)	Is facilitating apps that use ZKPs the USP of this L2 demo?	
11	Node ranking		
12	Data reduction (Compact)		
13	Fingerprint payment	Was thumb ID intended for HPB Wallet? Was this too difficult?	
14	ChouTA (App for draws)		
15	DEX (Mobile, txns in-wallet)	Any further plans for Hpdex to make it better serve HRC20 tokens?	
16	NFTs (Marketplace)	Can HRC-1155s be added to facilitate batch upload of collections? What checks and balances could stop spam?	Set standard expectations with curated quality/collections
17	Integrations (SZ)	What prospect is there of further integration?	
18	HPB Labs	Is there a standard package of support offered to incubator projects - if so, what does it include? Did Suanhang and LinkDNS collaborations add any value in 2021?	Open up the collaborative support to a Western dev team (could be via a competition?)
19	Marketing Communications	Can anything else be delegated to influencers, ambassadors, outreach workers or professional project managers in the West? What should we do a survey about next to inform developments?	See all community ideas listed here: t.me/hpbglobal/524761 Do lower-cost activities for HPB until ease of use gets traction with devs/projects: t.me/hpbglobal/524121 Get HPB Wallet reinstated on Google Playstore
20	Fun	Will AVA fundraise on a different chain? Is V1 on HPB, then V2 launch elsewhere, a model that suits the Foundation atm due to regulation in China? Was AVA built by the HPB team - what technical assistance was needed?	
21	Tools	Does Hpdex have further development to do in 2022?	Fork an approved HRC20 token batch sender: t.me/hpbdev/1532 Find a secure fiat on/off ramp solution for DApps running on HPB (ie. fiat to HRC20, HRC20 to fiat).

22	BOE Accelerator	Any further plans for the BOE?	Create a visual recorded live video proof of the average 5000 TPS capability (counter/speedometer on screen?): t.me/hpbglobal/524223
23	MainNet	<p>Was the Oct exploit the result of a vulnerability KnownSec audit missed? What procedural changes did you make as a result of the exploit?</p> <p>What do you think was the tech team's best achievement in 2021?</p> <p>Theoretically, could you provide a supply of BOEs to a paying client allowing them to set-up and run a fork with a new token but similar benefits?</p>	<p>Make an English PDF copy of the KnownSec security review available.</p> <p>Publish any subsequent code audit reports to show no known vulnerabilities.</p>
24	Node Plan	How many HPB did the average node earn in 2021?
