

Write a SNAP! Program that does the following without using lists:

Asks user to enter a number named "numberofitems" which tells you how many items are in the list they are going to enter.

Ask the user to enter a list of numbers without using the "list" feature

Input count number values.

Calculate the sum of all the number values.

Calculate the average of all the number values.

Determine the minimum number value.

Determine the maximum number value.

Display the Minimum value

Display the Maximum value

Display the Average value

Display the Sum value
