

FOIL Method Presentation

You are going to create a Google Presentation that demonstrates the FOIL method for multiplying Binomials together. There are 5 steps in the FOIL method. They are:

1. Multiply **F**irst terms
2. Multiply **O**utside terms
3. Multiply **I**nside terms
4. Multiply **L**ast terms
5. Add terms together

Your presentation should have a title slide, and then have a slide dedicated to each step in the method. This means your presentation will have 6 slides.

Your title slide must include:

- Your name and period
- The words Foil, Outside, Inside, and Last to explain the acronym FOIL
- A picture that explains the full foil method (top right of this page)

Your other 5 slides must:

- A Title
- A brief explanation of how to do the step
- Include a picture or text demonstration of the step being done

Save your Presentation as "FOIL Method"
