

Linux Beginners Search Engine - Old Documentation.

Update: 27.1.2013

We have moved Wiki to [New Location](#) for easy navigation. Please visit this website for latest updates. **This page is no longer maintained.**

Linux Beginner Search Engine (LBSE) is a Google Custom Search Engine Tailored To Search Specific Linux Sites and URLs Only. It weeds out many irrelevant links that we find in default google search. You can further narrow down search by selecting any of the 16 [Refinement Filters](#) and / or [Date Range Filters](#).

In simple words LBSE gives Relevant Search Content by separating 'Class' from 'Mass'.

Please check out links below.

Go to Linux Beginner Search Engine (LBSE) [Home Page](#)

If you like LBSE, you can also [add it to your Favorite Browser](#), so that you can search using LBSE directly through your address bar 😊

We hope, you find this search tool useful.

Thanks
