Think about and discuss how and why the hours of daylight vary throughout the seasons. Prepare a presentation to present to someone in your family teaching them (in as much detail as possible) how and why we have seasons and how and why the hours of daylight are different in each season. Also focus on what season we are in right now, how the amount of sunlight is getting longer or shorter and why. It might be fun to also investigate how the earth seems to be regenerating itself now that most humans are staying at home and if this could possibly have any effect at all on our seasons, amount of daylight, or even our calendar.
