

AP Style

1. Henry has just picked up snowboarding for the first time. He's been watching the Olympics and following Red Gerard. The next time he goes to Sugar Mountain, explain how the following psychological terms might impact his experience.
 - Prosocial
 - Role Model
 - Latent learning
2. A researcher paired the sound of a whistle with an air puff to the eye to classically condition Ashley to blink when the whistle alone was sounded. explain how the researcher could demonstrate the following:
 - ~ generalization
 - ~ extinction
 - ~ spontaneous recovery
 - ~ classical conditioning components (UCS, UCR, NS, CS, CR)
3. In her kindergarten classroom, Margaret's teacher employs some of the concepts she learned in her Psych 101 class in college. Explain how she could use classical conditioning to get her students to look toward her on the playground. Explain how she could use operant conditioning to reinforce cleaning up after playing in centers.
4. Explain how Bandura's Bobo doll experiment illustrates each of the following:
 - ~ modeling
 - ~ mirror neurons
 - autonomic nervous system
5. You have just transferred to a new high school midway through the year. Examine how the following psychology terms could help your adjustment process.
 - Latent learning
 - Negative punishment
 - Explicit memory

IB Option:

1. Explain the elements of classical conditioning that can be used to treat anxiety disorders.
2. Examine the role operant conditioning play in the treatment of eating disorders?
3. Examine the ethics of Bandura's research in social learning.
