

## SL: The BEST vehicle is .....

Definitely NOT Public commutes...

You and I know that...

They are NOT fun to spend hours a day in are they?...

How about a car?

Actually <name>, what's stopping you from buying a car instead? (name variable is optional)

Could it be:

- The upfront cost
- Future instalments
- Scaling gas prices,
- Maintenance fees,
- Servicing etc...?

Perhaps it is not the cost but rather, every Monday morning on your way to work, a *cacophony of honking sounds seizes your attention...*

When you turn to check the commotion, you see:

*Roads as congested as a beehive*

*Your face turns pale as the thought of you being trapped in that crowd floods your mind*

*It also pollutes the air and environment*

Maybe that's not such a good idea...

So what is the BEST vehicle?

Can you guess what it is?

Yep! It's an Electric Scooter

It is:

- Fast
- Much cheaper than a car
- Low maintenance

- No need to deal with traffic
- Compact storage
- Lightweight

Unlike a car, you can feel the breeze gliding across your face and in-between your hair while cruising

But, just like cars, electric scooters have their differences too, for different occasions

I can help you choose your own electric scooter [HERE](#)
