## Defining objectives

**Momentum trader** - I want to do scalps when the market is breaking out of his range.

**Scalps** - Because I work for myself I can see the charts the whole session of the day. I'm living Europe. So the US markets works good for me because when the US session starts it's the end of the working day.

**Stock and options** - I understand stocks and options. So I am more comfortable with this asset class. I use options to trade underlying asset.

**Risk seeking** - I am 28 years old and don't have big things at risk. Also I want to grow my capital to live from it.
