

*I find the videos super valuable! I'm a student athlete which means I'm out of the classroom a lot for nation and international events. With this technology, I am able to see exactly what I missed in class. Although they can't replicate the conversations in class, the videos allow me to get the core information and formulate questions for when I return. I can also review these videos whenever I'm confused about homework or study material.*

I really like the video note taking system because it allows me to rewind if I do not get something. I can watch it again until I get it. Also, If I miss a day, I can stay up to date and not be behind everyone else when I return to class. I like the online webwork program because it is a good way to practice math. Also, I really like how you can try as many times as it takes to get the right answer.

This short set of problems lets Ms.Krishnan have an accurate representation of my personal work. This way she can pinpoint my misconceptions. Plus she is able to create a personal relationship between teacher and student that is barely achievable in such a large class and school.

- Harrison

Using video and media in class to help learn new concepts has been very beneficial to my learning process. I really enjoy being able to learn the material at my own pace and be able to pause the video to take the time to try out the skill and check my work. Beginning the class with an online warm-up (webwork) has also been very helpful because it gives me a platform from which I can base my progress in that day's class on.
