

LEVEL 1- Defining objectives

Username: Leipper

-Type of trader

For my point of view my perfil trader is a Momentum Trader.

-Time availability

I usually can spend between from 2-4 hours per day to make my analyses from the markets, so I can act as a swing trader because of my availability.

-Asset class

About the asset class i am more interested in the stocks and CDFs, and it is what i usually invest, but of course i am here to learn and find about new things and to better everyday.

-Risk Tolerance

I am an young men and i am not afraid of risks so i consider myself as a Risk Seeking.

LEVEL 2- Defining the Strategy

Entry Parameters: I will use a system of box to box and i will use the 9 MA box on daily chart, my entry parameters will be a squeeze on sqzpro and i will enter on the next day of daily candle close price above the 9MA box and above 9 and 21 MA.

Exit Parameters: I will use the mix of predetermined levels and when the price change of direction to exit my parameters and see if after the backtesting it is good enough to mix them together.

Risk per Trade: I have a daily job so i have a salary and every month some part of it i take to my investments account, so i wanna be profitable on that and i dont expect to take the money out of the investing account soon just in a long future.
