

“Client Self-Check”

The purpose of the “Client Self-Check” is for mosquito.buzz clients enrolled in our ***Synthetic Mosquito Control Program*** to easily measure their control & reduction ***after they have had their second application.***

How to measure?

It's easy. Walk to a spot outside of the designated control & reduction area and gauge the mosquito pressure at that time. Now, walk back into the controlled environment and gauge that pressure.

If the pressures are the same, your control & reduction is lost. Call us - we will schedule another application right away!

If the pressure drastically changes upon entering the controlled area, your control & reduction is in place.

Are you noticing an increase in pressure compared to last year, last week or yesterday, yet control is in place? Many factors contribute to this, the weather and the overall mosquito pressure in the area are the main reasons. No two days are the same so the 80% control and reduction we guarantee fluctuates with that.

The client self-check is designed for you, our client, to understand what the 80% control and reduction means for you and your property.

We here at mosquito.buzz take a tremendous amount of pride in providing you with our services and we hope by adding this tool to your toolbox, all of our clients will have a better understanding of how we are able to help you ***stay outside!***
