

Rahim 'MILL' Mendes

Basic Information

Sex: Intersex Transgender Male

Age: 26 legally, 22 chronologically

Ethnicity: Malay (Buginese) - Armenian

H-Rank **GREEN**
GENE

A **son**, a **conduit**, and a spirit of **humanity**.

Psychological Condition

Mill has several medically diagnosed mental conditions, including general anxiety disorder, depersonalisation-derealisation disorder and being autistic. He also experiences psychosis symptoms.

However, his mental state is notably much more level-headed, reasonable and empathetic than most of YCZ's residence, due to actual commitment to mental health recovery with therapy and medication.

Physical Description

Mill stands at 160cm (5'3) and weighs about 200kg (440lbs) despite a moderately built frame. It's clear that he regularly keeps fit.

With small wings resting on his temples, Mill's curly mop of soft sun-bleached and grey-streaked brown hair frames over his freckled olive-toned face.

Notable physical features include deep scars etched across piercing sunburst eyes, and zig-zagging scars along his inner forearms.

General Disposition

Mill is generally amicable and empathetic with most people he meets, though practises a professional distance to those perceived as law enforcement.

Empowerment Chargewalker

Conduit

Mill's increasing control over his empowerment as an electron conduit has expanded to manipulating the charge of the atoms that compose his body—**allowing him to disassemble and reassemble his body at will** via atom spacing.

Passively, Mill's body absorbs, cycles and discharges electrons from his surroundings, **allowing him to charge most electronic devices and batteries** on contact.

Due to the change of his biology, **Mill's mass is now 200KG**, akin to that of a tungsten block. As such, he also needs to consume much more for sustenance and maintenance of such weight to ensure atom integrity.

Phantom

In his intangible form, projectiles and hits shy off dismembering most (*under M1 rating*) **would pass through him with no effect**. However, shockwaves and other equivalent vibrations from capable empowered (*such as T2*) are able to stagger him back into tangibility. This form allows him to pass through non-leded surfaces, but anything beyond an armspan's thickness will strain the atomic charge too much and force Mill back to tangible form, likely lethally suffocating him.

While intangible, all held objects and equipment on him such as his attire and weaponry become intangible as well. This renders all of them unusable due to their temporary disintegration.

Tazer

If Mill were to pass through any organic and conductive being, **they will be stunned with a shock for about 5 seconds**, with enough amperage to shatter an empowered's focus and tasing that would induce a layman into intense muscle spasms and incapacitation, usually called the 'let-go' threshold.

Mill's intangibility lasts as long as his stamina, charge or focus does. He loses the ability to remain intangible when he is extremely fatigued or runs out of electrical charge.

Usage Cases

Mill utilises his abilities primarily as means of escape. He tends to stay close to walls so he can sink into them and shimmy away to safety. If all else fails, he can also lie down and sink into the floor, crawling away under its surface to a safer area to return to tangibility. He also depends on his mass to either be too heavy to lift, or to knock assailants away as he flees.

Acquired Skills

I TYPE ON DA PUTER

After being given the responsibility to be a Paradigm HR council member and its Watch's secretary, Mill has developed his skills in **copyediting and formal/professional writing and communication**.

He is also much more systematic and organised, and able to work better under pressure. This has helped immensely in **honing and maintaining his focus** for many situations.

PARKOUR!

Mill had developed most skills alongside the build for freerunning, especially in scaling and slipping through unconventional structures and spaces in urban environments. He is able to **traverse up, along and through buildings** with relative ease.

In addition, his mobility training with Celeste alongside her flights has him capable of **utilising tools to assist him in urban landscape traversal**.

PAL-VLOV

With his past experience in being a counsellor for refugee camps during the war, as well as his current line of work as a licensed psychiatrist and psychotherapist, Mill has remarkable skill in **managing his own mental health as well greatly helping others** with theirs too.

His empathetic nature, alongside his knowledge in mental health recovery, help greatly in **talking down, calming down, de-escalating and defusing** most emotionally or traumatically charged situations.

MENDAS MIND

Alongside his professional knowledge in mental health, his unwavering faith in his practised religion as well as the influence of his father Amalu, Mill's **mental stability and willpower stands remarkably strong**.

As such, he is **highly resistant to having his sanity broken, and can easily discern hallucinations** from reality.

MACGYVER

Thanks to his special interest in technological and mechanical anatomy since childhood, Mill had developed the fine dexterity and intuition for **bodging, tinkering, refurbishing and repairing**. He can do so with any consumer-grade and certain industrial grade electrical and mechanical equipment.

He is also able to **create up to basic grade prosthetics** for daily use, with basic mundane accessibility.

OSHA APPROVED

Working part time at the Shaft with Steelwork has equipped Mill with the specific knowledge of **operating industrial construction machinery and vehicles**, as well as their mechanical anatomy and circuitry.

He is also now **knowledgeable in logistic details for said machinery and operation complications** on paper, and how to navigate such.
