ABSTRACT

This study tried to determine and identify how the management functions of sand volleyball clubs, which include planning, organising, leadership, and controlling, have been implemented in the Special Region of Yogyakarta. The data collection was conducted using a questionnaire with the validity test using product-moment and Cronbach's Alpha's reliability test. The questionnaire was distributed to 20 people consisting of athletes, coaches, and club managers who were chosen using a total sampling technique. Then, the data were analysed with the descriptive percentage technique. The results obtained showed that the management function implementation in the sand volleyball clubs in the Special Region of Yogyakarta is in the "strongly agree" category by 70%. It meant that athletes, coaches, and managers agreed or stated well in implementing the management function of the sand volleyball clubs in the Special Region of Yogyakarta.

Keywords: management function, sand volleyball clubs
