

Facebook Ad 1:

"I've spent thousands trying to find a foundation that actually matches. I've never found one."

Sound familiar?

You've tried them all. MAC turns orange. Drugstore shades look like ghosts. And that drawer full of foundations you bought once and never touched again? That's not a collection. It's a graveyard. 🪦

It was never your fault. Traditional foundation uses one fixed color for millions of different faces. But your skin shifts with seasons, hormones, even hydration. A static shade was always going to fail you.

Korean beauty figured this out years ago.

Derma Muse goes on white and transforms to match your exact skin tone on contact.

Adaptive Pigment Technology reads your skin chemistry and adjusts in real time.

✨ New Korean skincare-makeup hybrid you won't find in stores

🪄 Easy 60-second application with built-in brush

🌿 Safe for sensitive skin, vegan, dermatologist-tested

Your last foundation.

Facebook Ad 2:

Why women over 50 are choosing Derma Muse over traditional foundation.

The traditional foundation was designed for young, smooth skin. After 50, it settles into every line and actually makes you look older instead of better.

The more coverage you need, the worse it looks on you, and that's the part nobody in the beauty industry talks about.

Derma Muse™ was built to break that cycle.

- Its HA+ Technology plumps fine lines and locks in moisture while you wear it. Coverage actually merges with your skin instead of sitting on top and cracking apart by noon.
- One stick replaces your moisturizer, primer, foundation, and SPF50. No extra layers means nothing to pill or separate on mature skin.
- Adaptive Pigment Technology reads your skin chemistry and adjusts in real time, even across dry patches and texture changes that come with age.
