

Position: Frontend Developer

Project: [Reddit](#)

About us:

We work in the field of software engineering based on a variety of technologies. Our company is a member of the vendor program, which gives employees the opportunity to work with clients in Russia, the United States and other countries (**Microsoft, Twitter, Google, Airbnb, Dropbox**, and many others). This is a great opportunity to transfer experience and experience with leading engineers of world-renowned companies.

We are looking for a **Frontend Developer** for a project from **Reddit** (The Search Experience team)

A bit about project:

"The front page of the internet," Reddit brings over 430 million people together each month through their common interests, inviting them to share, vote, comment, and create across thousands of communities. Come for the cats, stay for the empathy.

The Search Experience team is among the most innovative, forward-looking teams at Reddit. Together we're trying to build an Internet of free, independent communities that are powered by a fun, collaborative economy. Our goal is to deliver best in class feeds to the users as well as making it as easy to find communities as it is to enjoy it. There are currently 3 silos on the team for each major application group (iOS, Android, Web) and a common shared ownership of the GraphQL endpoints that power the experience.

Team enables users to safely navigate, find, and engage with the breadth and depth of Reddit to find community and belonging.

Building this future requires a careful balance of engineering, product, design, and business. It's a matter of creating the right user experience, and that's where you come in. We're looking for strong frontend engineers who can work at the intersection of these problems, quickly build new products, and advocate for our users throughout the whole process.

Responsibilities:

- Build new features and products into the Reddit web app using modern frontend tools (Typescript, React, Redux, GraphQL, Web Components)
- Collaborate directly with designers and product managers to build delightful user experiences
- Own engineering projects from design to implementation to deployment and maintenance
- Solve complex frontend challenges around performance and code reusability while continuously improving code quality

Qualifications:

- Strong middle/Senior engineers. 3+ years professional experience building web applications with HTML, Javascript, and CSS. We are also open to candidates with less experience who are rising stars and are able to bring other valuable experience to our team.

- Excellent communication skills. You must be able to collaborate effectively with teams in a fully remote environment and discuss complex topics with technical and non-technical audiences.
- Able to work effectively under schedule pressure to fix bugs, review code, design, write, test new code, and diagnose production issues.

Nice to Have:

- Experience working with React
- Experience working with Web Components (lit components)
- Holistic understanding of software systems - able to collaborate with backend and native mobile engineers to write design docs and design effective APIs
- Experience building accessible features
- Experience building web applications that work seamlessly and performantly in mobile browsers
- Experience building complex animations and transitions to make delightful UIs
- Full-stack background is a plus

We offer:

- Possibilities of relocation to the USA
- Entering a professional level equivalent to world standards;
- High wages (we proceed from the wishes of the candidate and the level);
- The choice of a remote job or office in Kazan;
- LCA with dentistry;
- 50% payment of sport or English courses;
- An excellent team of high-level professionals and rich engineering culture.
- Flexible working hours.
