 - W3Schools
- Neatly Organized
 - Functions are Sorted by Categories
 - Quick Access to Filter Between JS Types
- Color Coded JS Types
 - Properties & Methods Have Designated Colors
 - Know JS Version by Quick Glance

UI/UX Enhancements

- Icons/Action Icons
 - New CSS3, JavaScript, and Site Feeds Icon.
 - Added "Updates" icon to Home Tab - Opens up the "Web Design Cheat Sheet" BBM Channel which gives sneak peeks and updates.
 - Added "Inspiration" Icon to Site Feeds - Opens up my "Web Design/Development" BBM Channel.
 - Added "Foundation" Icon to HTML5/CSS3/JavaScript Resources - Links to Team Treehouse's Introduction to HTML/CSS/JavaScript Videos.
 - Changed the "Open In Browser" icon to match the one that BlackBerry World uses for a more consistent cross-app experience.
- Editor Preview Page
 - Swapped "Share" and "Edit" on the main Action Bar. Many people did not realize how powerful the "Share" feature is within the preview page and were requesting for features that the share button actually includes. The "Share" function on the

preview page allows you to share all of the code it took to make the page. You can email it to yourself, save it to the Remember app, etc. I was able to kill two birds with one stone with this modification because now not only is it more accessible, but the “Edit” button was pretty redundant anyway because it’s no different than just swiping backwards or pressing the “Back” button.

- Settings
 - Added more useful links
 - Settings is reorganized

More information, tips/tricks, and leaks can be found via the App’s Twitter [@WDCSApp](#)
