

## GROUP 4

Work in small groups and **record a video** where you discuss about the following questions:

- *tell us something about your daily life: which of your actions have an impact on the environment?*

- *what are you already doing individually, at home, at school to save the planet?*

- *what is the separate collection scheme in your area?*

Have a look at the following website to find out 16 steps you could take to reduce your carbon pollution. <https://www.count-us-in.org/16-steps/>

- *Which steps are you already taking? Which one(s) are you ready to take? Which actions will you do*

*Maya, Alessandro, Maria Stella*

Hi! Today we're going to talk about the environment and the small things we usually do to save it.

- Right, I propose to start with a personal question. Which actions do you do daily to take care of our environment?

To take care of our environment I turn off the tap every time I brush my teeth.

Good, it's important for the environment to save water.

I try to use a metal water bottle instead of plastic water bottles that creates more waste. For example when I do sport or I have to take some water with me I usually use it in a canteen.

That's a good idea, instead I switch off the lights every time I am not in a room, so that I don't waste electricity.

I totally agree, I'll start to doing it too

- Very good, then 'd like to know if there is a separate collection scheme in your area, and how is it arranged?

Yes, In my area there is a very functionally separate collection scheme:

On Monday they take away general waste.

On Tuesday organic and plastic/cans

On Thursday organic and garden waste

On Friday paper

On Saturday glass/cans and organic waste

In my area the separate collection scheme is very similar:

On Monday and Friday they take away general waste

Organic waste on Monday and Wednesday

On Friday and Thursday plastic and Paper

And glass and cans on Saturday

In my area there is a separate collection scheme in fact on Thursdays they take away general waste.

- Right, let's have a look at the website Count us in, where there are some that do to help the environment. to ask: which of the 16 steps are you already taking?

I'm already some of those: for example I cycle everyday and I often walk instead of I also use my brother's old clothes instead of buying new ones to create less .

I'm already some steps too: for example I repair and re-use the objects in my house, I usually eat seasonal food, I have solar panels to reduce the emissions, and I'm also trying to fly less.

many of these steps, but I don't eat too much meat. Instead I eat some vegetables everyday, because they are good for your health, and sometimes I try to eat seasonal food.

- Well, now, we could begin to take other steps to improve the condition of the environment, so which actions that you are you willing to do?

I could drive an electric car (one day) and cycle more to reduce car pollution and the emissions of carbon dioxide in the air, and i really think i will do it.

That's a good idea, instead I'm ready to switch my home energy into green energy and use an electric car instead of a petrol car, also to reduce the emissions of carbon dioxide in the air, and because really like electric cars, they are very innovative!

Really good, I totally agree with your ideas, then I would like to use solar panels in my house to make it more sustainable and help fight against environmental pollution.

Nice, we've come to the end. ow i hope we will be even "green" than before and I'm sure we will be committed to help the environment.

Siete sicuri che il video duri 3 minuti? Dovreste inserire più domande o racconti riguardo alla prima parte. Inoltre non deve essere un interrogatorio, ma dovreste aggiungere delle kinking phrases, ad esempio:

I see

I totally agree with you

I take your point

That's a good idea!

etc.
