

## Reproduction Lesson:

For this lesson on reproduction, you will be covering the major differences between asexual and sexual reproduction.

-Asexual

-Sexual

Go around the room with a cup of numbers. Have each student pick a number. Tell students to take out their laptops and find the google slide that is on the Canvas page. Tell them to find the number of the slide that corresponds to the number on their piece of paper and that is the animal/plant that they need to research.

For the research, students need to find ....

### Relative complexity of the organism

- Number of parents
- Reproductive mechanisms
- Parental Care
- Genetic variation

Once the students have finished the research and added the information to the google slide, they will each present to the class what they found.

For closure, complete the table of asexual vs sexual reproduction.
