

Wade Miller's Curriculum Project

For my curriculum project I hope to develop a series of tools I can use to assist in my teacher of economic related materials. I have begun by creating activities I hope to use in my supply and demand unit. My goals for this project is to integrate the new technology tools I am learning in this class with my current instructional techniques for economics.

My objectives for this project will include utilizing google docs and learning how to use them in my classroom. Using QUIA to create classroom activities related to economics, utilize wiki's as a way to share information, and create understand Prezi presentation tools well enough to teach my students how to create their own Prezi this upcoming school year.

Below is a link to my QUIA activities I have created about supply and demand.

[QUIA Supply and Demand Activities](#)

I have started to develop a track on www.trackstar.com about Supply and Demand Curves. The track number is #429002.

Here is a E-sheet I've created about Supply and Demand basics.

[E-sheet for students.](#)

I've also created a hot list of useful links related to teaching the basic supply and demand concepts.

[Hotlist of links](#)

Here is a survey I created using a google form about the reaction of demand to different determinants.
