CSL 1.0.2 Release Preview

Over the past few months, Citation Style Language developers have worked to address a backlog of feature requests. This work will be reflected in two upcoming releases. The first of these, 1.0.2, is slated for release shortly. Its focus is on easy to implement, non-controversial additions, principally new item types, fields and terms.

Please leave comments on this document or start a discussion on the [CSL Forums](#) with any questions or concerns.

v1.0.2

This will add new item types, terms and variables, with the highlights being:
