

Week 8, Frog Rocket

Measurements can be tricky and practice is the only way to get better at reading them. Leap frog rockets are a fun way to compete with siblings and practice reading measurements.

What You Need:

- [Printable Frogs](#)
- Disposable drinking straw
- Scotch tape
- Scissors
- Glue
- Ruler or tape measure

Directions:

1. Measure one end of your drinking straw and mark it at 2 ½ inches
2. Cut at the 2 ½ in mark all the way through the straw
3. Tape one end of the 2 ½ in straw closed
4. Position the frog so the head is at the end you taped closed, then tape or glue your cut out frog to the piece of straw that is 2 ½ inches
5. If you used glue, wait until it is dry.
6. Mark your starting line
7. Place the frog straw on the end of the longer piece of straw and blow into the open end
8. See how far your frog can go and then measure from the starting line to the landing zone.
9. Repeat to see just how far your frog will go!

Don't forget to upload a short video of you measuring your frog's distance to social media with **#futurerosies** to enter the contest!
