Macronutrient Intake Regulation

- ✓ Animals adjust intake based on changes:
 - in energy density when offered a single diet,
 - protein (amino acids) when allowed to select between multiple diets.
- ✓ Animal is able to sense composition of incoming energy and amino acids and adjust intake to match need. (Supply of Nutrients)
- ▶ Do animals adjust intake based in changes in physiological need? (Demand for nutrients) (growth, reproduction, exercise, cold).

to show the same thing that the animal is somehow monitoring
