

When will the Platform be released?

The platform is soft dated for October, 2017.

When will the token be unlocked?

DRP release is soft dated for October, 2017. The community votes to officially unlock the platform. The tokens that will be used for functions on the platform will be DRPS, and DRPU, which users will need to obtain by changing their DRP in through a token changer that will be made available on the platform.

How and when will the vote to unlock the VC platform take place?

There is a voting mechanism built into the smart contract for DRP. When DRP is released, you will be prompted on how to participate in this vote. We will vote when DRP is released this month, of October 2017.

How will we be informed of a vote?

Initially, newsletters will be released to inform of necessary votes; most specifically, the vote to unlock the DRP token. After this initial vote takes place, the Dcorp Forums will be Dcorp's primary medium for all votes and distribution of information.

Why are you creating two new tokens?

We created two new tokens to become as compliant as possible with multiple regulations around the world. As DRP was already coded to act as both a utility and a security, to maintain our entire investor base while protecting everyone; we decided to split the token into two: DRPU and DRPS. This allows for those who reside in heavily mandated regulatory zones to choose which token best fits their needs and comfort. Now as both a separate utility and security token [respectively], our community is not forced to hold something they may not be comfortable with.

Can I just hold onto my DRP?

Yes, although DRP will not serve any purpose other than a utility to convert into DRPU and DRPS.

What is the Difference between DRPU and DRPS?

DRPU:

A utility token that will afford voting rights and future discounted ICO rates.

DRPS:

A security token that will afford voting right, future discounted ICO rates and ETH dividends based upon profits generated from the derivatives exchange.

Note: Bonus votes and higher discounted ICO values are only based upon holding a higher amount of DRPU for initial Dcorp ICO investors who choose to take the 1:2 DRP/DRPU conversion. An individual DRPU token when purchased on the exchange will hold the same weight as an individual DRPS.

How do I convert DRPS to DRPU, or vice versa?

There will be a token changer on the Dcorp platform that will convert the two tokens seamlessly. Both tokens can be swapped whenever the holder chooses to do so. 1 DRPS can be swapped into 2 DRPU and 2 DRPU into 1 DRPS, accordingly.

How long will the token changer be available?

Indefinitely.

Will I be able to switch between DRPU and DRPS at any time?

Yes, and the token changer will always be available

What token should I get?

This depends on a variety of factors, including your own preference and the country/territory from which you reside.

Is this solution permanent?

DCORP FAQ ON DRPS AND DRPU

This is a solution that has been both ran by US based law firms and approved by the DCORP legal team. There is always opportunity for a better solution, and if approved from a legal standpoint, there is potential that it could be made into a proposal and put to a vote.

Can I hold both DRP and DRPS?

Yes, as they are both independently created ERC20 Tokens.

What will the fee be to exchange between DRPS and DRPU?

We have not currently decided on a fee schedule. Though, we do plan on the fee to be very minimal, initially. After this initial phase, we do expect to increase the swap fee.

The fee will be implemented to ensure some aspect of regulatory control regarding the flipping of one token to the other often, causing volatility.

When will both tokens be tradable on exchanges?

This is a unique question, as we have two unique tokens. Our Relation Coordinators are working to have both tokens listed on as many exchanges as possible. We are quite certain that some exchanges will only accept one token or the other; however, to further link the value of each unique token beyond our own method of conversion, we hope to have both tokens listed on as many single exchanges as possible.

When can I expect dividends and how much will I receive?

Dividends will be product of the derivatives exchange, thus the exchange must be public in order to profit. According to our roadmap, we have this slated for the end of the second quarter, 2018. The amount received will be determined by several factors: Dcorp profits, DRPS held, and percentage of profits distributed. These are all difficult to determine at this time.
