

## Football Studio Dice

Live Football Studio Dice replaces cards in a live game format with a twist. No longer a tricky away day or dip in the home form, the dice determine the score. And like every good game, it's a two-half game, so you can do everything. This is a real-time dice game powered by evolution. It's the result of two red dice and two blue dice.

### How to play

The live football studio is very simple to play. Bet on a home win, away win, or draw in each round of the game. Two cards will then face up on the football pitch-style table. One is the home betting position on the table and the other is the away betting position. The position that receives the higher card wins.

### RTP

The RTP for this live casino game is 97.75%.

### Gaming features

Each round starts with a betting round that predicts which home or away will win. I can also guarantee that the results of the round will be tied. Home and Away pay 7:1 in most situations, while tie bets pay an equal amount. If 12 people on both sides are tied, the payout is 79:1. The game does not provide immediate results. Instead, the game is decided by two rounds that are reminiscent of a soccer game. The top two shakers stop first and display the results. Then, after a slight delay, the bottom two shakers stop to show the final result of the round. This is how the announcement of the results creates interest and makes the Football Studio Dice more interesting. [카지노사이트](#)

Developers have implemented several additional features that make this title more convenient to play. Football Dice Studio displays the results of the previous round in the lower right corner. In the other corner, you can see real-time scores for news, upcoming games, and ongoing soccer games.

### Did you know

The biggest multiplier is 80 times. In this case, the result is a draw (tied) and both totals are 12.
