

Google Chrome Apps and Extensions

The Differences:

An App is an application or program that runs in the browser that takes you to a website. There is user interaction within the app. Examples include games, photo editors, audio recorders, concept map making, and video recorders and players. Apps are located on Chrome start pages (new tabs). They are full icons in the [Chrome Web Store](#).

An Extension enhances the user experience, adds productivity to any website when using the Chrome browser. There typically is little user interaction. Examples include URL shorteners, timers, screen captures and readability aids. Extensions are located on the right side of the omnibox. They appear as puzzle piece icons in the Chrome Web Store.

Recommendations - Chrome Apps for Education

- **AutoCAD Sketchbook** (also available as iOS and Android apps) for drawing.
