

## **Office of the Secretary of Energy, /u/azorahai2557**

**Press Release 07/09/2018, 20.00 E.E.S.T.**

**Greetings,**

**As most of you already know, today it's a historic day for the United States. It has only been a few hours since Chief Commander /u/nonprehension issued an executive order that promises to transform the United States energy industry as we know it.**

**It has been clear that one of this administration's first and most important goals was to secure a clean, sustainable and environmentally friendly future for the country. Our Department has helped the President achieve this goal, by not only enforcing measures to eliminate climate change, but also by investing in new sources and forms of energy.**

**Therefore, I stand here today to express my unconditional support for the executive order, and I hope that my fellow Americans do so too. In the next few days, as proposed by the order, I will author and enforce a new directive that will create a timeline for the end of all coal operations throughout the states.**

**Furthermore, in order to help the DoE advance its plans for the next of this Cabinet's term, I have contacted members of the House of Representatives to confirm a budget increase. This, in my opinion, is vital for the completion of our objectives.**

Lastly, I hope that the press release has been informative and insightful for all attendees. Such meetings between the Executives and the Press always help boost American democracy and emphasize on the principle of government transparency, a value advocated for by both this and previous administrations.

Once again, I would like to thank you for attending this press release. I now expect to answer any questions that might have occurred to you in the last minutes.

Signed by the Secretary of Energy, /u/azorahai2557

A handwritten signature in black ink, appearing to read 'azorahai', written in a cursive, flowing style.
