

## How AI was used on this site

- AI tools like [ChatGPT](#), [Claude](#), Google [Gemini](#), and others were used to improve the text on this section of the website.
- The AI tools were used to take the initial ideas and text and turn them into draft sentences. For example, tools were frequently prompted to “revise and update this”.
- If the AI’s sentences were good, they were adjusted to fit the rest of the text.
- The AI also suggested spelling and grammar changes.
- Humans carefully checked every sentence to ensure accuracy and tone before including it.
- AI was also used to create some images displayed on this site.
- Most importantly, humans were in charge of the entire process to support creativity and teamwork.
