PROFESSIONAL EXPERIENCE

CITI

New York, NY

Software Engineer Intern

2020-2020

- Deployed a custom version of a containerized web application locally with 6 Kubernetes containers using Docker.
- Debugged Angular and React codebases to fix issues in a pre-launch sprint for a product update release.
- Collaborated with a remote team using agile methodology to develop software while syncing code changes using Git/GitHub.

URX

San Francisco, CA

InternHacks 2020 Inaugural Cohort, Back End Developer

2020-2020

- Built DUZE, a full-stack web application that allows users to track their subscriptions and also analyze their spending using insightful visualizations, with a team of 5, where I worked on the backend.
- Designed multiple MongoDB database schemas using mongoose.js and built a backend server in express.js that allows our frontend react app to interface with a cloud-hosted MongoDB Atlas database by serving HTTP requests over RESTful API endpoints.

JP MORGAN CHASE

New York, NY

Software Engineering Internship

2020-2020

- Increased efficiency of Perspective's open-source code by modifying it to automatically update and visualize data in real-time, using Node.js and React.
- Improved the performance of the new python client script by 60% by adding 3 new test case methods to the unit test class to debug it during development.
- Created alerts to notify traders whenever stock price correlation values exceed an upper/ lower threshold value.
- Implemented Software version control using Git.
