

Tested on: DEX PS3 with reBug 4.81.2 and webMan

FOR COBRA ODE USERS:

If you want to install and use the jp voice DLC follow these steps:

1. Download and install the game...
 2. Download Sonicman and a tool called IDC (Install Disc Creator)... Download the DLC fix for the US version (by takerukain): Download
 3. Download the US version of the jp voices DLC: Download
 4. Use the IDC tool to crate a mountable Cobra ODE iso from the jp voices DLC...
 5. Put the sonicman iso and the created jp voice DLC iso (from step 4) in your PS3_GAMES folder on your external HDD
 6. Run the IDC iso in your Cobra/PS3 and install the DLC...
 7. Put the DLC Fix onto a Fat32 formatted USB stick and put it in one of your PS3 USB ports
 8. Run Sonicman from your Cobra ODE/PS3, Open the File Manager. Select the dev_usb00X and browse to the PKG. Open it and install the DLC Fix...
 9. It was much work, but you're ready to play the game... Otsukaresama desu!

USE IDC to install the Jap voice DLC successfully

Use E3 ODE

Use this tutorial to convert the pkg (jap voice DLC) to iso (Download), then transfer the iso to ur ext. hdd and install it to ur ps3

After that, install the dlc fix.pkg (i installed it using e3-pkg installer)

ERROR 8001003C

If someone receives error 8001003C when starting the game from ISO, this error is caused by sdk version, you have to change the sdk version when resigning the eboot:

You need to edit/replace the PARAM.SFO and EBOOT.BIN files first before convert the game folder to iso

Here's the fix : Download

Replace the files then convert into iso

1. Use PS3Tools by Aldostools, right click on EBOOT.BIN and select Extract ELF, it

automatically changes the sdk version to 34 when it extracts the ELF.

2. Right click on ELF and select Resign EBOOT/SELF, this option creates a new EBOOT.BIN resigned to 3.40.

3. Resign EBOOT.BIN to 3.55 (I used ESSSE RESIGNER v4.2), edit PARAM.SFO to 3.55 (I used PS3Tools), create the ISO using genps3iso.
