

The best and more complete app for waiters

When it comes to restaurants and the food & beverage industry in general, such niche is constantly evolving with powerful platforms that guarantee efficiency, fast operation and reliability. Among many, software for waiters results a good example and the Waiters app its best exponent in this important aspect of the business.

Currently, running a pub, bar, restaurant, café or any other requires a capable platform that allows waiters to provide a great service. All of this by making the process of taking orders, menu management, table management and getting customers their food in time. The Waiters app is the perfect solution for such purposes.

What is Waiters app? The ideal platform for waitering at your restaurant

The Waiters app is a platform designed to make the job of every waiter and waitress at your restaurant or food & beverage-related business way easier. If waiters are capable of offering a fast, efficient and consistent service, this directly translates into customers' satisfaction and better reviews.

By taking benefit of the application, a great number of tasks can be improved and optimized in real time. From taking orders to deliver customers their food in time, the Waiters app is all about management respecting tables, cash, menus, inventory, costumers and notifications. Each of these aspects addressed and taken care at your business with the Waiters app.

Benefits of using the Waiters app

Using this platform brings plenty of benefits to the table for your business, as the best restaurant order taking app. Some of these advantages to take into consideration are:

- **Versatility:** Any type of food-related business you own, the Waiters platform is perfect to optimize tasks as the ideal app for bar, app for pubs, app for restaurants or any other.
- **A powerful management-centered software:** It all comes to state-of-the-art management capabilities of the software in every aspect of the waitering service.
- **Guaranteed reliability and efficiency:** A food ordering app for restaurants with powerful management solutions guarantees reliability and efficiency, improving attention and quick order taking.
- **Organization:** The Waiters app's advanced management tools allow incredible organization at every level at your restaurant. This easily shows in time that is saved in every order that is taken and delivered.
- **Comprehensive approach:** management possibilities of this restaurant order taking app do not reduce to waitering only, offering a wider approach. Therefore, along with management functions focused on orders, tables and customers, inventory and cash tools are also included.

Features of the app for waiters in more detail

In terms of features, this app for waiters includes characteristics that become a necessity for any food & beverage business. Actually, this is even more so if a waitering and restaurant ordering platform as Waiters app is compared to reservation software, accounting platforms, menu builders, POS, analytics and more.

Let's review each of the characteristics and possibilities of the Waiters app in depth, so you can acknowledge all of the advantages the platform provides at your restaurant or alike.

Menu management

By using the Waiters app, everything the place offers is in the palm of your hand and ready for customers to order. Of course, this must include menu management features, which allows to show different options like dishes and categories, as well as the possibility of modify them respecting availability.

Also, with easy menu management function, QR and other payments can be offered and set whether your business provides presential care, take away or delivery. With great menu management, orders and service in general can be easily streamlined for faster and more optimized and quality attention.

Order management

A good restaurant food ordering app for waiters and in general must provide an order management feature. With the Waiters app, any waiter or waitress can take customers' orders easily using a tablet, computer or smartphone right there on the table.

In this way, every order is taken and sent to the kitchen in seconds in a very organized and easy fashion. With the app, restaurants can forget about pen and paper and take use of top-notch technology and features within the app.

Right at the fingertips, controlling the orders is a piece of cake.

Table and costumer management

In a big restaurant, handling multiple tables and customers can quickly become a hassle with so many orders coming. This is when the Waiters app's table management feature comes in very handy to count on.

For instance, swapping and splitting tables is possible, as well as generating kitchen order tickets or KOT to one or multiple kitchens, in the case there is more than one of them. Also, it is possible to cancel orders, register certain details of the customer's request and more. All of this from any device and instantly.

Cash management

With the Waiters app, business owners have an available mobile terminal or cash register, which is very useful when it comes to cash management purposes. Therefore, to take an order directly on the table becomes easier, even when the customer is ready to pay for their order. Everything is saved, stored and synced for further reference in the future.

Inventory management

Tracking the inventory in a restaurant or similar business is always a challenge, especially when owners do not have available tools to do it. Fortunately, the Waiters app is the ideal platform to carry out such task, which allows to track from resources and supplies to equipment and more.

With this function, restaurant owners can save a lot time by avoiding carrying out inventory manually, avoiding running out of stock and keep depletion and usage in check. Keeping an inventory properly verified guarantees offering the best dishes and preparation with no delays.

Send via WhatsApp

The platform is compatible with WhatsApp, so the customer can send orders to the waiter and get a quick response about them instantly. This is a feature that is available face-to-face or also in the case of take away and delivery.

Notification on the smart watch

Using the Waiters app means every waiter can receive notifications on their smart watch, with the platform sending information about customers, tables and orders in general right there on their very wrist.
