README template:
https://www.drupal.org/docs/develop/managing-a-drupalorg-theme-module-or-distribution-project/documenting-your-project/readme-template

Quick formatting tips

Here is a summary of the preferred format for README.md:

- Headings in all caps.
- Headings underlined with `===`/`---` to the length of the heading, followed by a blank line.
- Two lines prior to headings (except the first one).
- Bullets denoted by asterisks (*) with hanging indents.
- Numbered lists indented 4 spaces.
- Bulleted lists indented 1 space.
- Text manually word-wrapped within around 80 cols.

Example readme:

https://git.drupalcode.org/project/easy_breadcrumb/-/blob/8.x-1.x/README.md

INTRODUCTION

Project Browser (PB) is a new way to find and install modules in your drupal installation. PB is an approach to make Drupal easier for newcomers following the steps we use in our everyday workflow of building a site: look for something, do a little research, and try it.

This browser lives *inside* the Drupal site itself, so you don't need to leave your site to look for modules. With a new User Interface (UI), Project Browser is intended to be faster and easier to use, with enhanced filtering capabilities to provide a streamlined view of projects--in a word, intuitive.

PB is a decoupled component that queries the Drupal.org API in real-time to ensure that the content is easily accessible and up to date. (You may write a plugin to switch using the Drupal API for your own backend if you wish.)

Our goal is to make it easier to find and install modules for people new to Drupal and site builders. Developers will also find this valuable since it provides the composer commands to get the modules.

 * For the description of the module visit:
   https://www.drupal.org/project/project_browser

 * To submit bug reports and feature suggestions or to track changes, visit:
 https://www.drupal.org/project/issues/project_browser?categories=All

REQUIREMENTS

This module requires no modules outside of Drupal core.

INSTALLATION

Install the Project Browser

Contributing

1. Authenticate the IDE with GitHub:

```
gh auth login
```

2. Fork https://github.com/grasmash/project-browser:

```
gh repo fork grasmash/project-browser
```

3. Add your fork to the cloned repo in the IDE:

```
cd /home/ide/project-browser
git remote add [your-fork-name] [your-fork-url]
git checkout master
git branch --set-upstream-to [my-fork-name] master
```

4. Install Svelte dependencies and start a "watch" process~

```
cd sveltejs
npm install
npm run dev
```

5. Disable Drupal's various caching mechanisms:

```
# Disable caching for development.
chmod 755 docroot/sites/default
chmod 755 docroot/sites/default/settings.php
cp docroot/sites/example.settings.local.php docroot/sites/default/settings.local.php
echo "if (file_exists(\$app_root . '/' . \$site_path . '/settings.local.php')) {" >> docroot/sites/default/settings.
echo "    include \$app_root . '/' . \$site_path . '/settings.local.php';" >> docroot/sites/default/settings.php
echo "}" >> docroot/sites/default/settings.php
echo "\$settings['cache']['bins']['render'] = 'cache.backend.null';" >> docroot/sites/default/settings.local.php
echo "\$settings['cache']['bins']['page'] = 'cache.backend.null';" >> docroot/sites/default/settings.local.php
echo "\$settings['cache']['bins']['dynamic_page_cache'] = 'cache.backend.null';" >> docroot/sites/default/settings.l
drush cset system.logging error_level verbose -y
```

6. Make your changes and commit:

```
# Make sure you complile Svelte files into HTML, CSS, and JS.
cd sveltejs && npm run build
git add -A
git commit -m "I did a thing"
gh pr create
```

CONFIGURATION

Navigate to **Administration > Extend > Browse**.

Filter by **Recommended projects** or **All projects**
Search and filter by **Title, Sort By, Order and Categories**
Customize results layout by List or Grid Format
