

QuotientDB Technical Documentation

Web Version

1. Open the website using the following link: <https://quotientdb.netlify.app/>
-

Installing Local Version

Prerequisites:

Before installing the local version of QuotientDB, ensure that the following dependencies are installed:

1. Node.js (required to run JS code)
 - a. Node JS Installation Guide: <https://nodejs.org/en/download/package-manager>
 2. Git (required to clone the repository):
 - a. Git Installation Guide: <https://github.com/git-guides/install-git>
-

Step-by-Step Installation

1. Open terminal (Command Prompt, Terminal, or Shell)
2. Navigate to the desired folder where you want to store QuotientDB:

```
cd /path/to/your/folder
```

3. Clone the github repository with the following command:

```
git clone git@github.com:awong50/QuotientDB.git
```

4. Navigate to the project directory

```
cd QuotientDB
```

5. Install dependencies with the following command:

```
npm install
```

6. Build the app using the electron-forge make command:

```
npm run make
```

7. Locate the application in the out directory:
 - a. Windows: Navigate to the out\make\squirrel.windows\x64\ folder and run the .exe file
 - b. macOS: Navigate to the out\make folder and install the application using the .dmg file
 - c. Linux: Navigate to the out\make folder and install the application using the .deb or .aApplImage file
 8. Locate the installed app in your file explorer. Upon installation, it will appear as an application in your system's app menu (Windows, macOS, and Linux)
